

HSC Technology Group signs reseller agreement with national e-solutions specialist Harrisontech

TBD August 2020

HSC Technology Group Limited has announced it has signed a reseller contract with national e-solutions company Harrisontech for its Care@Home and WeR@Home product lines.

Harrisontech is a digital media specialist providing quality web, communications and IT support to a large client base that extends across Australia.

The agreement will see the products made widely accessible to Harrisontech's clients including retailers, aged care providers, wholesalers and not-for-profits.

The WeR@Home platform is a security, safety and smart home solution enabling people to independently manage their home environment from anywhere, anytime, in real time, and on any screen. The advanced system is managed by a smart hub that connects to the mobile app and controls up to 98 devices, including a range of home security, safety devices and sensors, and home automation that leverages IoT technologies to deliver a complete connected-home experience.

Care@Home is an enhanced Telecare services platform providing an aging-in-place product suite that offers a seamless health monitoring experience allowing independence for seniors and peace of mind for their loved ones. It utilises artificial intelligence that gets to know your average routine in about four weeks from installation and provides valuable insights to carers or loved ones via the smart app including advanced fall detection and voice-activated alerts, enabling ageing at home with independence, dignity and peace of mind, yet connected to family and professional care if needed.

HSC has the exclusive distribution rights in the Asia Pacific region for all products across both platforms through Israel-based Essence Group.

Managing Director, Graham Russell, said the reseller agreement provides another point of sale for the company's products, increasing their overall reach in the Australian market.

"We look forward to working with Harrisontech, who specialise in a range of e-solutions and gaining access to their national network to optimise their technology offering," he said.

"As the only provider of the world-class Essence hardware, coupled with our proprietary software that that uses next generation Machine Learning and Artificial Intelligence to deliver decision-making insights, we can improve people's safety, independence, autonomy and most importantly their lives.

"More and more end users are demanding better home and care automation solutions and this agreement will allow us to provide our products and services to a much larger market."
